TRAINING COURSE TREE

Training and Resources to Enable a green Era

PRESENTATION OF THE COURSE

COURSE A1.1 ENVIRONMENTAL AWARENESS

PARTNERS

Training and Resources to Enable a green Era

Recipients:

Workers

Unemployed people looking for new job opportunities in the green job sector.

Companies and SMEs

NGO

Industry professionals

General public

Objectives:

Supporting jobseekers and workers in acquiring specific skills essential for working as green professionals; enable behavioural changes in consumption habits and lifestyles; share best practices and knowledge to combat climate change and accelerate the ecological transition.

Course structure:

Online on the Minerva E-Learning MINERVA® Platform in asynchronous mode

Course A1.1 Environmental Awareness

1. Introduction to Environmental Awareness

- a) Definition and objectives of environmental awareness
- b) The role of current generations in environmental protection for the future
- c) Discussion of current global environmental challenges
- d) Importance in modern society
- e) Environmental awareness as a solution

2. Respect for the Planet

- a) Importance of biodiversity and ecosystems for the health of the planet
- b) Strategies for the conservation of natural habitats
- c) Analysis of the impacts of human activities on the environment and strategies to mitigate them

3. Sustainable Use of Natural Resources

- a) Fundamental concepts of sustainability in the use of water, energy and food resources
- b) Practical approaches to reduce consumption and improve resource efficiency
- c) Techniques to manage and reduce waste including plastic pollution and food waste

4. Awareness and Education Methods

- a) Effective teaching methods for promoting environmental awareness
- b) Role of educational institutions and non-governmental organizations in environmental awareness
- c) Using digital platforms, educational games, and simulations to engage and educate audiences

Training and Resources to Enable a green Era

A1 - Environmental awareness

To tackle climate change, the EU strategy focuses on promoting environmental protection.

In light of the situation, there are **two main areas** for improvement:

- Transition to a decarbonized and environmentally friendly economy. This transition is expected to create numerous "green" jobs in a large number of sectors; Therefore, a shortage of skilled workers for these new jobs is expected.
- Holistic and cross-sectoral approach across all relevant policy areas to contribute to the ultimate climate goal. A holistic approach to environmental protection and sustainability also means that it is important to promote a sustainable approach to the overall dimension of human life: in education, work and daily routine.

Training and Resources to Enable a green Era

A1- Environmental awareness

Environmental awareness is a crucial imperative in the contemporary context, characterized by global challenges related to sustainability and the health of the planet. It is much more than a mere knowledge of environmental issues; It is a profound and responsible approach to managing natural resources and protecting the global ecosystem for current and future generations.

Today more than ever, environmental awareness translates into the adoption of daily practices and conscious decisions that aim to respect and preserve the planet. Fundamental is the recognition of the interdependence between man and the environment, as well as the consequences of our actions on the global ecological balance. This includes respect for biodiversity, sustainable management of natural resources and adopting behaviours that reduce negative environmental impact.
